Mailvision Camera Solutions

Mailvision is a software platform that allows the design of flexible and versatile solutions to supervise and control the processing of high-volume document and mail-kit production.

Benefits

- Eliminates high-cost labor-intensive manual quality control procedures
- Reduces down-time caused by manual quality control methods
- Increases the capacity of document processing equipment
- Reduces spoilage and re-work
- Easy-to-use interface for set-up mechanics and operators
- Identifies document errors in real-time
- Improves key account penetration
- Expands and raises service levels
- Increases the quality of document processing output
- Enhances corporate image

Readings

- Alphanumeric characters (OCR) and most fonts
- Bi-dimensional barcodes (e.g. DataMatrix, PDF417)
- Linear barcodes (e.g, Code 39, Code 128, Interleave 2 of 5)
- Patterns and symbols
- Custom codes
- Optical marks
- Magnetic strips
- RFID

Applications

- Matching of multiple documents
- Component selective inserting
- Read and print: in-line inkjet addressing/1:1 messaging
- Base stock validation
- Address Block validation
- Numeric and alphanumeric sequence verifications
- Component grouping
- Combination of any of the above-mentioned functionalities
